

GENESIS

SERIES H

Multi-Function Controller

Automated Central Irrigation and Fertigation Control

“ The difference this makes in our day-to-day work is amazing... ”

“ We were really surprised how simple it was to customize for our needs... ”

“ The increased level of control makes us much more efficient... ”

This controller features a simple user-friendly interface and a full range of configuration options for your operation.

- Control irrigation schedules
- Control fertigation with up to 10 different fertilizer recipes available
- Manage a full range of options including fertilizers, irrigation, pH and EC sensors
- Fertilizer injection options include rate, proportional, batch and adaptive dosing
- Evaluate and manage with real-time and historical data from your field operation
- Export data via USB flash drive or laptop
- Modular design for future growth

Options

- Wireless valve control
- Soil moisture monitoring
- Tank level monitoring
- Weather, temp RH frost alert
- Water flow
- Pressure
- pH monitoring
- EC monitoring
- Cellular gateway
- Remote radio network

When paired with the **Genesis Gateway** you gain full access to all information stored on the controller from any smartphone, tablet or PC. With the Gateway onsite you may also make use of any compatible sensors to monitor your operation.
